

ACHIEVE PCI COMPLIANCE

COMPREHENSIVE MANAGED SECURITY SOLUTIONS

Take control of your network to protect your company, customers and brand. Trustwave provides you with the most comprehensive managed security solutions to secure your business and achieve PCI compliance.

PCI COMPLIANCE IS REQUIRED

The Payment Card Industry Data Security Standard (PCI DSS) was created by the major credit card companies (Visa, MasterCard, American Express, Discover and JCB International) as a guideline to help organizations that process card payments minimize their risk of a security breach. As a result, business owners are required to implement security measures to ensure protection of their business and their customers.

YOUR PARTNER FOR DATA SECURITY

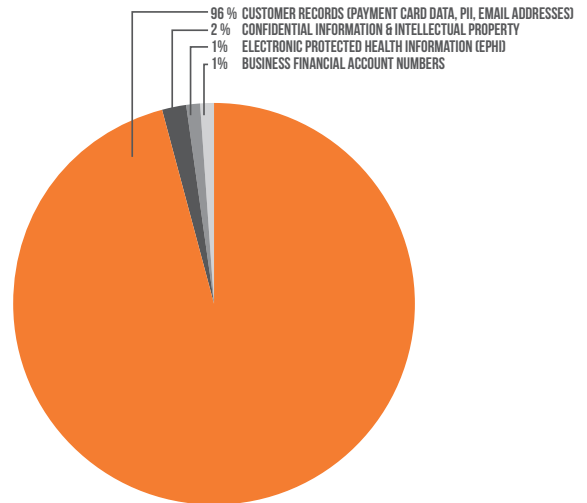

Trustwave has helped lower the costs for business owners to not only meet PCI standards but strengthen security measures. By outsourcing, companies don't have to worry about hiring a full-time IT staff, maintaining internal infrastructure and handling their own technical support.

The fully managed solution is driven by our team of PCI experts that have years of experience in the PCI and network security industry. We take away the daily management and hassle of securing and monitoring your network so you can focus on your business.

YOUR BUSINESS IS A TARGET FOR HACKERS

Achieving PCI compliance needs to be a priority to help protect your business and customers. As more businesses, like yours, use a high-speed Internet connection to process credit cards, there is a higher risk of data exposure and breaches. Without proper security measures in place this is an open invitation for hackers to access your network to steal valuable information and disrupt business operations.

TYPES OF DATA TARGETED

FEATURES OF MANAGED SECURITY SERVICES INCLUDE:

FREE

Free consultation to assess your business environment, risk and needs

All your network security, including a fully managed firewall, through a single vendor

IMPROVE VISIBILITY & CONTROL

Information at your fingertips. Our centralized portal provides comprehensive management of store networks and compliance services.

STEPS TO SECURE YOUR BUSINESS

Understanding how important this is, Trustwave encourages you to take action now, and partner with us to simplify your compliance process. By meeting and validating PCI requirements, you and your fellow franchisees can reduce the likelihood of a cyber-attack that could damage brand reputation franchise-wide. Follow these tips to get started:

- 1. **Address physical security in your store** - educate employees about security procedures and proper handling of information within your organization.
- 2. **Implement policies for employees** - this should include stipulations on how and when employees use the Internet and rules for system access.
- 3. **Ensure security of your Point of Sale (POS) systems** - you may need to involve your POS vendor to ensure that proper security measures are in place.
- 4. **Call Trustwave** - protect your network from the threats of the public Internet. Use a fully-managed firewall that includes anti-virus, intrusion prevention system (IPS), web filtering and more for complete security.
